(54) Title: METHOD AND SYSTEM FOR DETERMINING THE POSITION OF AN OBJECT MOVING ALONG A COURSE

(57) Abstract: The present invention is related to a method for determining the location and/or the positioning of an object, in particular a vehicle such as a train, moving along a known course, comprising the following steps : - determining an absolute position of the object with a first confidence interval, - determining a relative position of the object with a second confidence interval, - selecting the smaller confidence interval among the first and the second confidence interval, - determining said location and/or positioning of the object by means of the position corresponding to said smaller confidence interval.
